

**SOUTHEASTERN COLORADO WATER CONSERVANCY DISTRICT  
2025 AGRICULTURAL RETURN FLOW SALES PROCESS**

Applicants will submit to the Southeastern Colorado Water Conservancy District (“District”), acting by and through its Water Activity Enterprise, their total annual request for Fryingpan-Arkansas Project Water return flows (Return Flows) to be used for replacement. The request must also contain monthly estimates of the amounts of Return Flows required.

The District will estimate the total Return Flows available from the 2025 Project Water allocation and determine the maximum amount of Return Flows available for sale to each plan. Allocations will be made based on the District’s “Allocation Principles” and the “Policy Concerning the Sale of Return Flows from Project Water.”

Agricultural Return Flows allocated by the District are allocated on a time-forward basis. This means that the District’s allocation of Return Flows is based upon projected Project Water deliveries to agricultural entities. The lagged Return Flows from the application of agricultural Project Water in a given year will be similar to the lagged depletions created by agricultural well pumping in that same year. Therefore, the post-plan depletions from well pumping will be replaced by the lagged return flows from ditch irrigation with Project Water in the same year as the pumping depletions.

Purchasers are required to pay for the first half (½) of their total purchase upon notification by the District of the amount of Return Flows approved. The rate for Return Flows is \$21.90 per acre-foot or any adjustment the Board of Directors adopt. On or before July 15, 2025, purchasers must pay for the second half (½) of their total purchase, or any portion of the remaining amount required by their plan. Monthly maximum amounts of Return Flows available for plans that choose to pay for only a portion of their remaining Return Flows shall be reduced proportionally. Return Flows not paid for on or before July 15, 2025 will become available for sale to other users.

Purchasers may deviate from their estimated monthly Return Flow requirements. However, plans may not exceed the monthly maximum amount of Return Flows available for their plan as determined by the District, unless otherwise approved by the District. Return Flow purchases may not exceed the monthly maximums as set by the District unless additional Return Flows are available as determined by the District. Any additional Return Flows needed above the initial allocation must be purchased and paid for in full before being credited to the purchaser. Purchasers assume all risk associated when deviations from estimated monthly requirements for Return Flows by a plan result in such plan not being able to use all of their Return Flows purchased. The District does not guarantee to make up Return Flow shortfalls.

**APPLICATIONS MUST BE RECEIVED BY 4:00 P.M. MONDAY, MARCH 31, 2025**
